

... In Ice Rinks

- Full range, dramatic music for public skating and for figure skaters, especially with the QB sub bass.
- New bracket kits make it easy to install and adjust multiple speakers in a central point source system, important for reverberant areas.
- Lightweight speakers do not require special roof support, etc.
- Soundsphere loudspeakers are easy to demonstrate in retrofit situations. A very large percentage of demonstrations result in sales.
- Soundsphere speakers are used in facilities that range from small practice rinks to large hockey arenas
 and major figure skating championship-class arenas around the world.

Set-up a demonstration and hear the difference.
